How to install Python install on your machine:

I) For window:
Download anaconda from the link given below and install on your machine by double click:

http://continuum.io/downloads#all

II) For linux:
Open terminal and type

```
ipython
```

If not previously not install then follow the steps given below:
Download anaconda according to your operating system (i.e 64-bit or 32-bit) from the link below (

http://continuum.io/downloads#all

Open terminal and type:

```
$ bash Anaconda-2.x.x-Linux-x86[_64].sh
```

After accepting the license terms, you will be asked to specify the install location (which defaults to ~/anaconda)

Or you can use wget to download from commandline[copy and paste the link given below to your terminal]:

```
wget https://3230d63b5fc54e62148e-
c95ac804525aac4b6dba79b00b39d1d3.ssl.cf1.rackcdn.com/Anaconda-2.3.0-Linux-
x86_64.sh
```

And after download is finished do:

```
bash Anaconda-2.3.0-Linux-x86_64.sh
```
